

Gulfstream 280

The fastest, most comfortable Super Mid-Size jet.

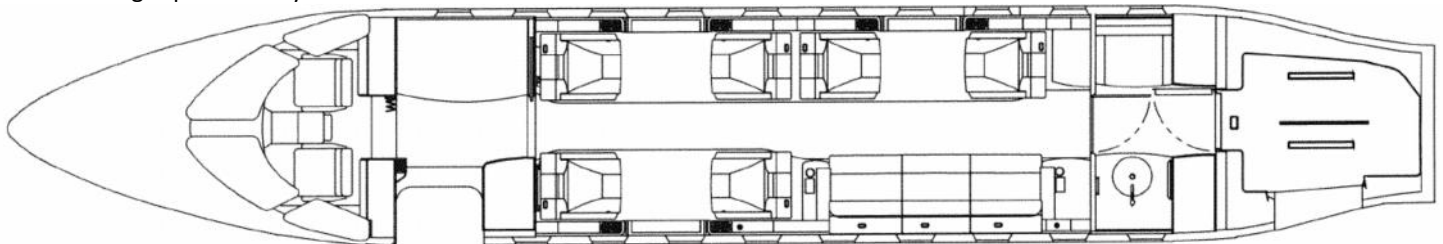

A newly designed long, sleek wing and high-thrust engines increase range and speed, yet fuel economy is so well maximized the G280 has earned best-in-class fuel efficiency.

The PlaneView280 cockpit incorporates state-of-the-art flight and navigation systems while auto-throttle and auto-braking set new standards for aircraft control and handling. The Gulfstream G280 is an aircraft so powerful and aerodynamic it redefines the performance and capabilities of super-midsize business aircraft. And the interior? Light, quiet and exquisitely comfortable—everything one would expect from Gulfstream, The World Standard™.

Gulfstream 280 Interior

The entry door has a 6-foot clearance to provide easy access. The cabin height of 6 feet 3 inches is better than any aircraft in its class. Paired with spacious width and length, that gives the G280 a cabin that comfortably seats up to 9 passengers with berthing for up to four.

19 windows provide natural light that permeates the G280 cabin. With 100 percent fresh-air circulation and a cabin pressurized to a lower, more easily breathable altitude, everyone arrives less fatigued, more alert and ready to focus on the mission ahead. Complimentary unlimited domestic Wi-Fi allows connection to the world below and a complete entertainment system can also provide in-flight productivity.

Gulfstream 280 Performance

The G280 flies at a maximum operating Mach of 0.85 at up to 45,000 feet. With the ability to fly eight hours nonstop at Mach 0.80, you can take off in New York and reach Milan, Italy or Lima, Peru; or, from London, connect with Dubai or Montreal, Canada. And of course a New York to Los Angeles flight can be completed in just five hours.
